

## CASE STUDY - Bespoke Spiral Staircase – Romsey, Hampshire

Our client was constructing a showroom and required a bespoke 'feature' spiral to access their mezzanine show deck. As the usage was semi public, we selected one of fully bespoke spirals with a diameter of 2000mm. To ensure it met the regulations we included a centre column handrail and ensure the clear tread width was no less than 800mm. The client chose solid oak treads and a stainless steel handrail to go along with the 'cream' powder coated steel structure. There was also a 5m run of glass balustrade along the mezz deck. This model is available for viewing.
