

CASE STUDY – Bespoke Spiral Staircase – Clothes Store, London

A designer clothes store required access to their large basement store room using an old lift shaft. A spiral was the only practical solution. As it was not on show we opted for a non slip perforated option powder coated in White. Simple vertical spindles and a tubular steel handrail provided protection around the circumference. Pictured directly after installation with the protective handrail packaging still in place.

TECHNICAL SPECIFICATION

FLOOR TO FLOOR HEIGHT	-4500mm
