

CASE STUDY - Bespoke Spiral Staircase – Office, Hackbridge, Surrey

Our client was a shoe manufacturer extending their existing office / factory in Hackbridge in Surrey and needed a spiral to provide access to a new mezzanine floor. Our brief was to create a stylish functional spiral staircase whilst matching the Beechwood flooring being fitted elsewhere in the building. We decided on beechwood treads supported by a powder coated steel structure, topped with a stainless steel handrail which we continued around the stairwell opening. As this was a commercial installation we included a handrail on the centre column

TECHNICAL SPECIFICATION

| | | |
|-----------------------|---|--------------------------|
