

## CASE STUDY – Model 71 – Monton, Manchester

Our client required a modern spiral staircase to access a bedroom in a loft conversion. It was required to be open, bright and attractive whilst matching the materials used elsewhere in the extension. Our model 71 seemed the perfect candidate. Stainless steel spindles and centre column with beech treads and handrail. A simple clean look fitted in perfectly with what the client wanted. We also supplied some stainless steel riser bars (not shown in photo) and two lengths of landing balustrade to run across the void.

### TECHNICAL SPECIFICATION

|                        |                                  |
