

CASE STUDY – WF Staircase – Cardiff

Our client was completely refurbishing an old annex and required a staircase up to their newly created first floor. The stair was to be the predominant feature in a tight hallway so needed to be compact in terms of size and appearance. Our WF stair offered the perfect solution combining open risers and 'cantilevered' style treads. The wall stringer was painted the same colour as the wall to further emphasise the floating effect and the stainless steel spindles gave the stair the modern feel our client was looking for.
