

CASE STUDY – WF Staircase – Basingstoke, Hants

In a renovation this client had decided to utilise a loft space for accommodation. Rather than going for a simple kit staircase for loft access, they decided to make more of a feature out of the space. Whilst many would have selected a spiral staircase, the suggestion of a WF (one of our most unusual feature stairs) sufficiently raised their interest. Following a tight turn, the WF nevertheless allows for a comfortable ascent: its open risers and stainless steel balustrade help to keep the area it was placed in light and airy.

TECHNICAL SPECIFICATION
