Model 20

Domestic Spiral Staircase

A very simple spiral staircase design for internal and external domestic applications. It is powder coated when installed indoors and galvanized when required externally.

The treads are pressed steel and are in-filled with either a non slip black rubber mat or a carpet inlay. Often customers choose to provide their own tread insert. When purchased for outside use the treads are non slip perforated steel.

The balustrade is made up of vertical steel spindles and a continuous steel handrail.

Landing balustrade and riser bars can be purchased separately.
