

Stepped Style Bespoke Domestic Staircase

The stepped style timber staircases incorporate a 'cut' stringer down one or both sides of the staircase. This means the stringer is positioned underneath the treads so you can see the riser and going (the treads) from the side of the stair. The spindles therefore span directly from the tread to the handrail. The stepped style stair can have open or closed risers, and be configured as a straight flight, quarter or half turn. Various timbers, spindles and newels are available.
